Flying School in Coolangatta, QLD At Australian Wings Academy (AWA) we create employable pilots by blending practical skills with a professional attitude. Utilising new generation training aircraft, a specially developed integrated PPL and CPL syllabus, blended learning methodologies and boasting some of the most experienced instructors and management staff in the country, our reputation for producing highly trained, professional pilots now precedes us. Flying schools aren't all the same! While each may have the ability to train you for the licence or rating you seek, the aircraft, instructor experience, syllabus design and delivery methods between different schools are considerably different. With the current worldwide demand for qualified airline pilots there has never been a better time to learn how to be a pilot. AWA's purpose built modern premises can cater for up to 60 students at any time, providing high-tech training facilities including: Fully air-conditioned classrooms (1 x 24 seat and 3 x 10 seat), Briefing rooms, A "black-out" simulator room, Flight Planning Area, Study Area, Student lounge with food and beverage vending machines, and Direct Airside access. AWA has the skill and expertise to manage the course from start to finish with proficiency checks to ensure students are progressing satisfactorily. Should a student fail to meet the required standard at each check, a review will be undertaken by a senior instructor and remedial training prescribed. The student will be reassessed following the remedial training and may proceed once performance is satisfactory.
