Australian Innovative Systems (AIS) is an award winning leader in the design, production and supply of commercial and residential chlorine generators and water disinfection technology. Via the process of electrolysis, AIS chlorinators let you bid farewell to the endless cycle of traditional chemical dosing by producing chlorine onsite and inline (as water flows through the system) or offline, conveniently and automatically. AIS's extensive range of advanced chlorine generators can disinfect water of almost any composition or TDS level, from sea water to ground, town or even waste water. With 20+ years industry experience and a reputation for continuous innovation, AIS' technology is suited to domestic and commercial pools, aquatic centres, theme parks, resorts, hotels, municipal facilities and the aquaculture, agriculture, utility water, industrial waste and mining industries. Proudly Australian owned and operated, AIS has exported its technology to over 55 countries worldwide.
