Solar Energy in Geelong, VIC Are you ready to join the eco-friendly solar power revolution? Geelong Solar Energy offers sales and installation of tier one solar panels and A-grade inverters for all commercial, residential, and business applications. Geelong gets the approval from Powercor before they start the job, providing all of the electrical paperwork necessary to finish the installation, including the certificate of electrical safety, electrical works request, solar connection form, and the Powercor solar pre-approval forms. Tier one solar panels installed by Geelong are made to the highest quality specifications, where production is controlled the manufacturing of the silicon cells to the frame and panel assembly. Tier one solar panel manufacturers have been in business for at least five years and are in the top 2% of PV manufacturers. The end result is a better-made solar panel with higher energy output and a longer life. If you're not sure what size of solar panel you need for your home, a handy solar systems sizing guide is available on their web site. Due to Powercor restrictions, not every home will be able to have solar panels now and/or in the future, and thus it is important to size your panels for your homes' needs in the coming years. You can get a free on-site quote by filling out the form at Geelong Solar Energy's web site or by phoning them directly.
