ihealthkonnnect is a price discovery and comparison platform for healthcare. Users can search, compare and save on cost of medical treatment in India.

As an easy to use platform, patients and their families can actually search for prices of various treatments, surgeries and compare costs across hospitals.

Once a user shortlists a hospital, the user can upload medical reports and send a query for a 2nd medical opinion and an estimated cost of medical treatment based on the medical reports.

Once the estimate based on medical reports is received, the user can actually book the medical treatment on the platform itself.
