Intermodal Solutions Group (ISG) is our mining and grain division. ISG is now a global company with agents in South Africa, Tanzania, Mexico, Brazil, Peru, Chile and a strong team in Australia and New Zealand. ISG has a blue chip customer base in both grain and mining and our engineering team has designed containers for cartage of wheat, copper concentrate, Coal, mineral sands, nickel & iron ore. Our container designs are all FEA tested and have gone through a rigorous testing programme. ISG designed the first ever bulk container certified BK2 compliant and these containers currently move copper concentrate in Australia. Our designs are tippler friendly and we work in closely with RAM spreaders on a global basis. RAM spreaders supply the tippler, trade named the Revolver because of the fast turning action. ISG has patented our unique lid lifting system that enables product to be tipped inside the ship's hull and by using a water suppressant makes this a dustless system. Our system has been given the green tick of approval and we estimate by using the containers instead of expensive storage sheds the customer saves over 20million USD. Projects like copper concentrate for OZ minerals have made us the benchmark in the industry. We have also just completed a large project in the

Congo for EXXARO to move iron ore out of Point Noir. Mineral sands is another area where we have become specialists and the supply of over 2,000 containers into Adelaide for the movement of this commodity places us again in the bench marking arena. Our team of dedicated experts are always available to assist you in your projects early stages so please feel free to contact any of our international sales team.
